

Datasheet

Lambda Premium Photo exposure

General Information

To achieve the most efficient, safest and cheapest realization of your order, you need to double check the following points when you have received your order.

The optimal data format

Do not hesitate to send us open files from your graphic programs or print PDFs, EPSs or TIFFs.
Please set on the file as possible 1:1 with 1 cm bleed, the resolution 200 dpi.

These programs are supported

Photoshop CS6, Illustrator CS6, InDesign CS6, QuarkXPress 9, FreeHand MX and PDF- and EPS files.

Fonts

Please send us all used fonts.

Colors

Please make sure that all documents are laid out for the CMYK area. However, special colors such as HKS or Pantone should be defined in the file. Color samples/proofs if available, should also be added. If you are using "exposure to light" without any information about the color or proof, we cannot assume any warranty concerning color correctness. It is no problem to test the file and make a sample, if you are willing to pay an up charge (25,- €).

Do you need help?

If the optimal file does not match with the delivered data, an extra charge of 80,- € per hour will be used for the revision on the data. It is not a problem to send you an exact calculation of your data after we have seen your file.

If you want further informations or have any questions/problems, do not hesitate to contact us via e-mail or phone.
